Name- Uday Madhok   **UID-** 21BCS3257

SCOPE-

The scope of our project is to create a community for the students to enhance healthy discussion of problems and bring out new and interesting projects for the university students. We also will have a unique feature which will help people to find like-minded people by testing the ability themselves. Later we will also set up college level competitions and hackathons for people to practice on and provide them a medium to express their ideas, form teams.

Planning and Task Definition-

Firstly we will be researching on the needs of building this website. After we have identified the need we will do a survey on a bunch of students to identify the flaws and additional features they would like to have in their college's Quora over the regular Quora. This brings us to our very first step of building the front end of our website, We will be using HTML, CSS, JavaScript for building the basic structure of our Website. After this we will use bootstrap, jQuery, Node.js and MongoDB for building our backend.
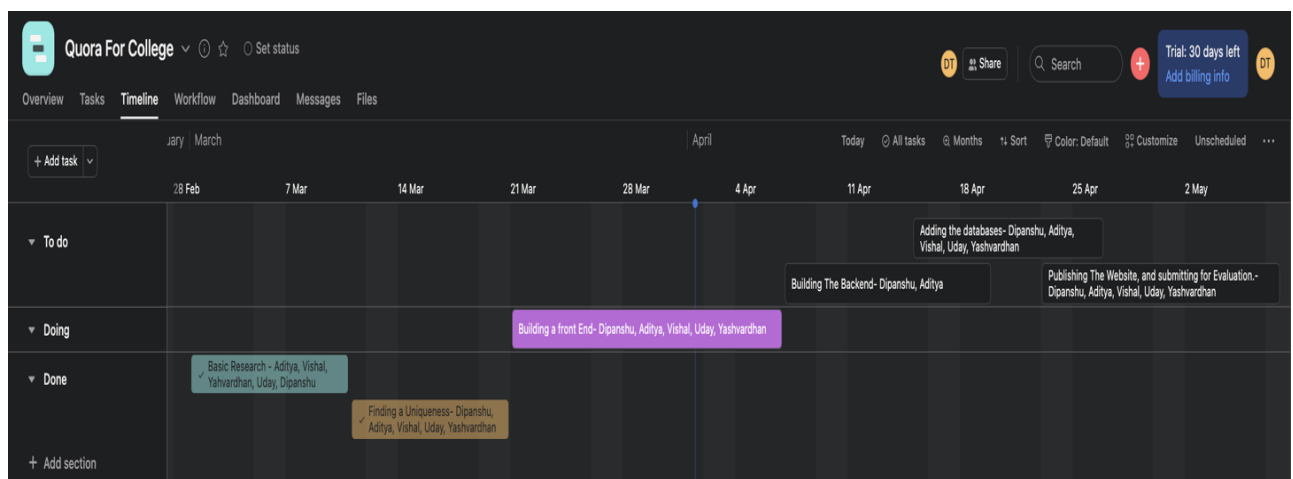

Literature Review-

So, as we all know there are a lot of sites present on web that serves somewhat similar purpose as our website
Site like Wikipedia , yahoo answers, stack overflow and Quora itself. All these sites have one thing in common which is
that all of them are open sourced and user can ask a certain question and its get published on the web site and other people can read and answer that question
And also these sites are very vast and bulky as there is no limit of the domain of questions asked.
Communities present on these sites are vast and diverge although it may help folks to interact with people
form diverse culture but for a general student who don't want to get in much of technicalities it's such a hassle.

What our site does is that it basically filters the irrelevancy present in these big community site as our project is based on college students it'll help them in interact within the college as well as with the people outside.

Problem Definition-

We all know that Quora is a place where people can gain and share knowledge. It's a Platform to ask questions and connect with people who contribute unique insights and quality answers.
In colleges we do face the same issue that someone has some idea and they are working on it and all of a sudden they get stuck at a stage where they do not where to go and whom to approach. So, for such students there can be nothing better than being in a community of people who thrive to work and have the zeal of moving forward by both learning and teaching. Currently, we do not have an intermediator between such students who want the knowledge and those who want to give the knowledge. So our website can be a value addition for such students in finding the answers to their problems in the quickest and the most reliable manner, with a sense of trust.

Objectives-

1. To build a website which helps in forming a learning community for college student.
2. Provide a medium to form teams for developing projects.
3. Engaging students with latest trends and talks using hackathons and competitions.
